#### Part III DETAILED ACTION

- 1. This action is responsive to communications: RCE filed on May 9, 2003 to the application, filed on January 13, 2000
- 2. Claims 1-25 are pending in the case. Claims 1, 21, 23 and 24 are independent claims.

## Claim Rejections - 35 USC § 102

- 3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:
  - A person shall be entitled to a patent unless --
  - (e) the invention was described in-
  - (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
  - (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).
- 4. Claims 1-9, 13-17, 21 and 23-25 remain rejected under 35 U.S.C. 102(e) as being anticipated by GEVER et al., U.S. Pat. No. 6,313,835 B1.

Per independent claim 1; <u>GEVER et al.</u>, discloses a method of providing an electronic marketing presentation, comprising:

Art Unit: 2178

displaying a marketing object container ("select template-Figure 9;), said marketing object container including a marketing location for receiving at least one marketing object to be presented in said marketing container to a user of an interactive medium ("...Internet banner prepared by double-click for inclusion in a web page selects different advertisements..."-column 1, lines 52-61);

associating a marketing attribute with the marketing object container ("user assigns conditional values or attributes of the animation sequence"-column 2, lines 26-35; see element 40-Figure 3, element 120-Figure 5; "user is able to change at least some of the attributes of the selected animation sequence, such as *colors, borders, sounds, embedded pictures...*"-column 2, lines 10-20); and

selecting at least one marketing object for being associated with the marketing object container ("create web page component based on animation sequence..."-column 2, lines 27-31; "prepare interesting Web sites and Web advertisements in order to attract customers and maintain their standing..."-column 1, lines 21-24; *e.g.*, animations **56**-FIG. 3).

Per independent claims 23-24; these claims are directed to a system and computer product, respectively, for performing the method of independent claim 1, supra, and thus are identically rejected.

Per dependent claim 2, <u>GEVER et al.</u> further discloses: displaying a marketing object container icon (e.g., compose condition button 128-FIG. 5), wherein an option

Art Unit: 2178

associated with the marketing object container is presented when the icon is selected (e.g., Preferably, interface 100 includes a command section 120 for adding conditional branch commands...and id preferably altered using a conditional editor interface, which is invoked by a condition control 128"-column 13, line 63 to column 14, line 6).

Per dependent claim 3; <u>GEVER et al.</u> further discloses: presenting a plurality of attributes to associate with the marketing object container ("user is able to change at least some of the attributes of the selected animation sequence, such as colors, texts, fonts, characters, borders, sounds, embedded pictures and models"-column 2, lines 15-20).

Per dependent claim 4; <u>GEVER et al.</u> further discloses: presenting a plurality of marketing objects that are compatible with the selected attribute ("Picture control **50** is similarly used to enter pictures into the animation sequence. Preferably, the user may import pictures which are represented in substantially any standard format. The picture is passed to server **26**, where it is converted if necessary into a standard format suitable for use in the animation sequence, and the description in the standard format is stored in the location allocated for the created Web page component"-column 9, lines 43-50 *et seq*, See example, element 40-Figure 3).

Per dependent claim 5; <u>GEVER et al.</u> further discloses: associating a style template with the marketing object container ("select template"-FIG. 9).

Per dependent claim 6; <u>GEVER et al.</u> further discloses: further comprising filling in an object into the style template (e.g., "Preferably, the user may import pictures which

Art Unit: 2178

are represented in substantially any standard format. The picture is passed to server 26, where it is converted if necessary into a standard format suitable for use in the animation sequence, and the description in the standard format is stored in the location allocated for the created Web page component"-column 9, lines 43-50 *et seq*. See also via example, element 40-Figure 3; "placeholders"-column 6, lines 50-60; "... the user preferably changes the attributes by selecting from a predefined group of replacements available from server 26. For example, in order to change character 60, seen in the animation, the user selects the character, ... a pop-up window 54 displays a plurality of characters from which the user may select a replacement for character 60"-column 9, lines 5-15).

Per dependent claim 7; <u>GEVER et al.</u> further discloses: comprising associating an item with the marketing attribute ("Preferably, the user may import pictures which are represented in substantially any standard format. The picture is passed to server 26, where it is converted if necessary into a standard format suitable for use in the animation sequence, and the description in the standard format is stored in the location allocated for the created Web page component"-column 9, lines 43-50 *et seq*. See also example, element 40-Figure 3. See also citation for claim 14, supra, *i.e.*, column 9, lines 5-15).

Per dependent claim 8; <u>GEVER et al.</u> further discloses: selecting a style for the marketing object container ("select template"-FIG. 9; "...selects from a plurality of basic animation sequences... or able to change at least some of the attributes of the selected

animation sequence, such as the *colors, text, fonts, characters, borders*, sounds, embedded pictures, and models"-column 2, lines 15-30).

Per dependent claim 9; <u>GEVER et al.</u> further discloses: associating a feature with the marketing object container ("attributes"-abstract).

Per dependent claim 13; <u>GEVER et al.</u> further discloses associating the at least one marketing object with the feature ("Preferably, the user may import pictures which are represented in substantially any standard format. The picture is passed to server 26, where it is converted if necessary into a standard format suitable for use in the animation sequence, and the description in the standard format is stored in the location allocated for the created Web page component"-column 9, lines 43-50 *et seq*. See also example, element 40-Figure 3).

Per dependent claim 14; <u>GEVER et al.</u> further discloses: wherein the marketing object container is dynamically associated with the marketing attribute ("conditional branch"-FIG. 5; "dynamic web page component which reacts differently, *i.e.* which presents a different display to visitors, ... according to a predetermined scheme"-column 2, lines 30-40).

Per dependent claim 15; <u>GEVER et al.</u> further discloses: wherein the marketing object container is dynamically associated with the marketing object ("preferably, the user selects a plurality of web page components and for each web page component states a

Art Unit: 2178

condition that must be fulfilled in order for the particular component to be displayed"-column 2, lines 40-45).

Per dependent claim 16; <u>GEVER et al.</u> further discloses wherein a plurality of marketing objects are selected to be associated with the marketing object container, and wherein the marketing attribute determines which of the selected marketing objects is associated with the marketing object container at a particular time ("dynamic web component, which is displayed differently to visitors at different times"-column 2, lines 60-65).

Per dependent claim 17; <u>GEVER et al.</u> further discloses: wherein the selected marketing objects are associated with the marketing object container according to a schedule ("receiving a scheme which depends on the time at which the dynamic component is displayed"-column 5, lines 10-15).

Per independent claim 21; GEVER et al. discloses a method of creating a

marketing presentation comprising:

defining the location and size of a marketing object container in the display medium

(inherent in the template "select template" (step not labeled)-FIG. 9);

associating a marketing attribute with the marketing container, the marketing attribute

including parameters that define haw the marketing object container can be used in a

marketing presentation container ("user assigns conditional values or attributes of the

animation sequence"-column 2, lines 26-35; see element 40-Figure 3, element 120-Figure

Art Unit: 2178

5; "user is able to change at least some of the attributes of the selected animation sequence, such as colors, borders, sounds, embedded pictures..."-column 2, lines 10-20); receiving subsequently from a user a selection of the marketing object container and at least one marketing object to be displayed in the marketing object container ("create web page component based on animation sequence..."-column 2, lines 27-31; "prepare interesting Web sites and Web advertisements in order to attract customers and maintain their standing..."-column 1, lines 21-24; e.g., animations 56-FIG. 3; e.g., "Place Picture here"-FIG. 3, "placeholders"-column 6, lines 50-60; "... the user preferably changes the attributes by selecting from a predefined group of replacements available from server 26. Fore example, in order to change character 60, seen in the animation, the user selects the character, ... a pop-up window 54 displays a plurality of characters from which the user may select a replacement for character 60"-column 9, lines 5-15); binding the at least one marketing object to the marketing object container ("posting the web page component including the animation sequence with the changed attributes to a web page"-column 4, lines 15-16; i.e., GEVER et al. COULD NOT have functioned as described if the changes were not bound, therefore it MUST have taught binding); and displaying the marketing object in the marketing object container in accordance with the parameters of the marketing attribute (... evaluated when the Web page component is viewed. Preferably, changing one or more attributes includes adding conditional flow directives to the animation sequence..."-column 4, lines 30-32).

Art Unit: 2178

Per dependent claim 25, <u>GEVER et al.</u> inherently discloses: a data signal embodied in a carrier wave and a system memory, because it COULD NOT have functioned as described otherwise. It further implies a CD-ROM, floppy disk, tape, flash memory, and hard drive. It is noted that dependent claim 25 recites a *Markush* group. - *See Ex parte Markush*, 1925 C.D. 126 (Comm'r Pat. 1925). It is noted, nonetheless, that CD-ROM, floppy disk, take, flash, system memory and data signal embodied in a carrier wave were all recognized as interchangeable means of transporting and storing a computer program, and thus were implicitly disclosed in the computer program of <u>GEVER et al.</u>.

#### Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C.  $103^{\circ}$  and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 12 and 19 remain rejected under 35 U.S.C. 103(a) as being unpatentable over GEVER et al.

Art Unit: 2178

Per dependent claim 12, <u>GEVER et al.</u> demonstrates all elements as applied in the rejection of dependent claim 9, supra. "Official Notice" is hereby taken that it was notoriously well-known to associate product literature with an advertisement. It would have been obvious to *PHOSITA* at the time of the invention to associate product literature in <u>GEVER et al.</u> by providing an authoring tool to hyperlink to literature about <u>GEVER et al.</u>, and in order to provide the user of <u>GEVER et al.</u> with further information about a product in its advertisement, in order to assist the user in making a purchasing decision.

Per dependent claim 19, GEVER et al., implies wherein the at least one marketing object is displayed after it has been approved, because the user of GEVER et al. customizes the authoring object, and it is *implied* the he/ she approved it before displaying it on his/ her web page. Thus this feature is obvious over to a Person Having Ordinary Skill In The Art, *i.e.*, *PHOSITA*, at the time of the invention over GEVER et al., alone, because it was *implied* by the GEVER et al. reference that at least the author approved of the object because it would not make sense for him/ her to insert an object that was unapproved. "In considering the disclosure of a reference, it is proper to take into account... the inferences which one skilled in the art would be reasonably expected to draw therefrom"-*In re Prada*, 401 F.2d 825, 159 USPQ 342, 344 (CCPA1968) cited in MPEP 2144.01.

٠.

7. Claims 18 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over GEVER et al., US 6,313,835 B1, in view of TOBIN, US Patent no. 6,141,666 A, issued 10/2000.

Per dependent claim 18, <u>GEVER et al.</u> demonstrates all elements as applied in the rejection of dependent claim 17, supra. <u>GEVER et al.</u> further *implies*: wherein the selected marketing objects are inserted in the marketing object container based on a second marketing object of a second marketing object container ("... select a link address **64** in the display window, and using 'links' control **55**, along with a respective entry window, any change the address of the link"-column 9, lines 37-42).

TOBIN, on the other hand, explicitly demonstrates customizing a web site based on a referring partner (...data which is dynamically retrieved by the database means in response to the particular class in which the client belongs, *i.e.*, based on the identity of the network site referring the client to the system server"-column 3, lines 25-30). It would have been obvious to *PHOSITA* at the time of the invention to employ the customization of TOBIN in the advertisement authoring system of GEVER et al., by dynamically customizing the business object of GEVER et al. based on a referring partner *implied* in the ad generation system of GEVER et al., in order to increase the relevance of the business object to the user of GEVER et al.

Per dependent claim 20, <u>GEVER et al.</u> demonstrates all elements as applied in the rejection of independent claim 1, supra. <u>GEVER et al.</u> further *implies*: wherein the

Application/Control Number: 09/483,175 Page 12

Art Unit: 2178

selected marketing objects are inserted in the marketing object container based on a second marketing object of a second marketing object container ("... select a link address **64** in the display window, and using 'links' control **55**, along with a respective entry window, any change the address of the link"-column 9, lines 37-42).

TOBIN, on the other hand, explicitly demonstrates customizing a web site based on a referring partner (...data which is dynamically retrieved by the database means in response to the particular class in which the client belongs, *i.e.*, based on the identity of the network site referring the client to the system server"-column 3, lines 25-30). It would have been obvious to *PHOSITA* at the time of the invention to employ the customization of Tobin in the advertisement authoring system of GEVER et al., by dynamically customizing the business object of GEVER et al., based on a referring partner implied in the ad generation system of GEVER et al., in order to increase the relevance of the business object to the user of GEVER et al.

8. Claims 10-11 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over GEVER et al., US Patent no. 6,313,835 B1; issued 11/2001, in view of HENSON, US 6,167,383 B1.

Per dependent claims 10-11; <u>GEVER et al.</u> lacks an *explicit* recitation of associating a "cross-sell" and "up-sell" feature with its marketing objects. <u>HENSON</u>. on the other hand, demonstrates dynamically associating a banner object **100** (abstract,

Application/Control Number: 09/483,175 Page 13

Art Unit: 2178

col. 9, lines 40-55) wherein an "up-sell" or "cross-sell" feature was associated with the object (col. 9, lines 43-44). It would have been obvious to *PHOSITA* at the time of the invention to combine <u>HENSON</u> with <u>GEVER et al.</u> by providing a "cross-sell" or "upsell" feature with at least one of the marketing containers of <u>GEVER et al.</u> in order to bind cross-sell and up-sell objects into the template of <u>GEVER et al.</u>, for example, in a manner disclosed by <u>HENSON</u>. Furthermore, this would have provided the benefit of increasing likelihood of selling more merchandise in the catalogue system of <u>GEVER et al.</u> in a manner disclosed by <u>HENSON</u>, because it would have been recognized that people would have been more likely to purchase/ consider for purchase related items, and thus the combination would have had the advantage of increasing likelihood of sales of its advertised items.

9. Claim 22 is rejected under 35 U.S.C. 103(a) as being unpatentable over

PECKOVER, US 6,119,101 A, issued 09/2000; in view of GEVER et al., US

Patent no. 6,313,835 B1; issued 11/2001.

Per independent claim 22; <u>PECKOVER</u> discloses: a method of creating a marketing presentation in an interactive medium, comprising:

displaying a marketing object container on a display medium (e.g. step 578-format, display Template & instructions, FIG. 31A);
displaying a number of campaigns that are available to associate with the marketing object container (Use selects market 564-FIG. 31A; Note the "market" described by

Art Unit: 2178

٠.

<u>PECKOVER</u> meets the "broadest reasonable interpretation of campaign, even though identical terminology was not employed.), each of said campaigns being associated with a plurality of offers compatible with the campaign;

receiving a selection of a campaign to apply to the marketing object container (User selects market, step **564**-FIG. 31A);

displaying a plurality of offers that are compatible with the selected campaign (user selects product or generic Template and instructions, step 576-FIG. 31A); and receiving a selection of at least one offer for placing in the marketing object container ("Ad composer" 578-FIG. 31A, *Note*: an *offer* is inherent in an ad).

PECKOVER lacks an explicit recitation of claimed "in response to selection of a marketing object container"; however, it explicitly discloses templates. GEVER et al. on the other hand, explicitly demonstrates that it was known to select a container and provide a GUI for components to select components to be included in the container (e.g., "Place Picture here"-FIG. 3, "placeholders"-column 6, lines 50-60; "... the user preferably changes the attributes by selecting from a predefined group of replacements available from server 26. For example, in order to change character 60, seen in the animation, the user selects the character, ... a pop-up window 54 displays a plurality of characters from which the user may select a replacement for character 60"-column 9, lines 5-15). It would have been obvious to PHOSITA at the time of the invention to employ a GUI for selection of the ad of PECKOVER by presenting a placeholder and

Art Unit: 2178

• •

selecting the market and offer of <u>PECKOVER</u> in order to have an easy to use GUI for the replacement of elements, e.g., ads, in the template of <u>PECKOVER</u>.

#### Response to Arguments

10. Applicant's arguments filed on May 9, 2003 have been fully considered but they are not persuasive.

On page 3 of the argument, Applicant asserts that:

Read in light of the Applicants' specification, "marketing attributes" in claim 1 are patentably distinct from "conditional values or attributes" as recited in Gever et al. Marketing attributes include marketing campaigns and features in merchandise marketing, scheduling of objects to be displayed, behavior-driven targeting of marketing material to a user, and profile-driven targeting of the marketing material to a user. (Paragraph 1, page 16, Specification). Examples of marketing attributes include ad banners, catalog promotions, category dependent content, category lists, co-marketing campaigns, among others listed at pages 16-17 of the Applicant's specification.

However, Gever in fact discloses exactly the "marketing attributes" as Applicant defines it in the above paragraph. Note that Figure 3 item 40 does represent an advertising window. The attributes that the user can add to the container include the marketing "text", marketing "picture" (e.g., items 56 and 60). Furthermore, the "scheduling of objects to be displayed" is disclosed by Gever, since item 42 in FIG.3 discloses the animation sequences.

Accordingly, Gever anticipates all the limitations of claim 1.

#### Conclusion

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steve Hong whose telephone number is (703) 308-5465. The examiner can normally be reached on Monday-Friday from 8:00 AM-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Herndon, can be reached on (703) 308-5186.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

### Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, D.C. 20231

or faxed to:

After-final

(703) 746-7238

Official

(703) 746-7239

Non-Official/Draft

(703) 746-7240

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington. VA., Sixth Floor (Receptionist).
